# activity 1.3

Marcos Miquel Lisarde
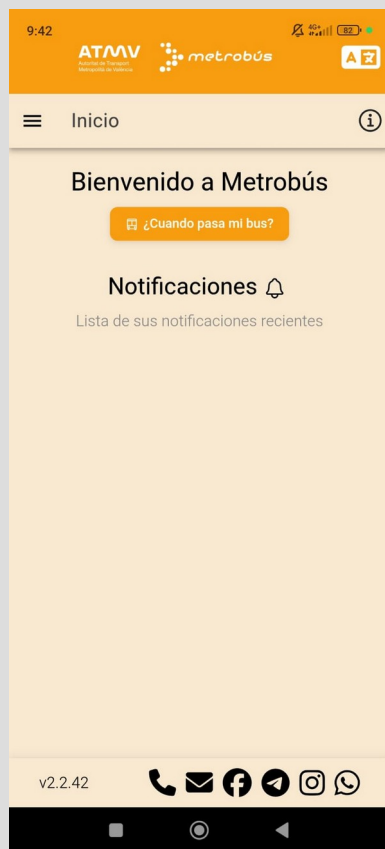

App chosen for the asignment: Metrobús

Diagram:

The Metrobús app has more views than this, but for the sake of simplicity, I chose to use only the ones I find more useful

The app starts at a welcome page, where you can access a menu that serves as the center of the app and shows all the main options.
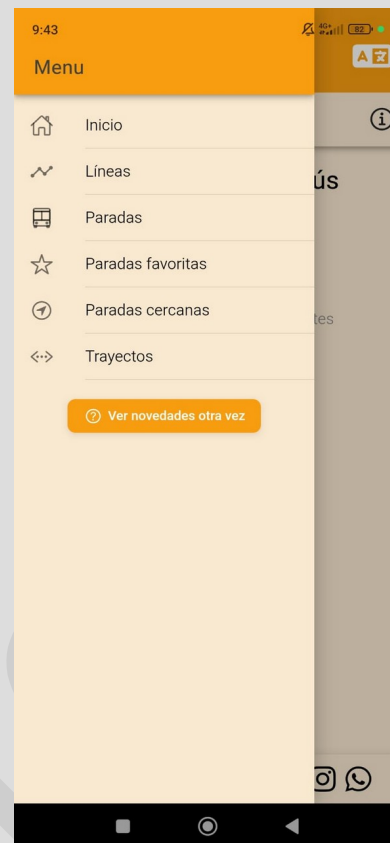

From there, you can access the nearby stops menu or the favorite stops menu. From the first one, you can access the map, where you can select stops, and from the later, you can directly access the stops you have marked as favorites. Once you have selected a stop, you can access it's schedule.
You can also change the lenguage via a view that is available from every other screen.

Screenshots and UI elements:

Welcome page | App Bar and Bottom navigation menus

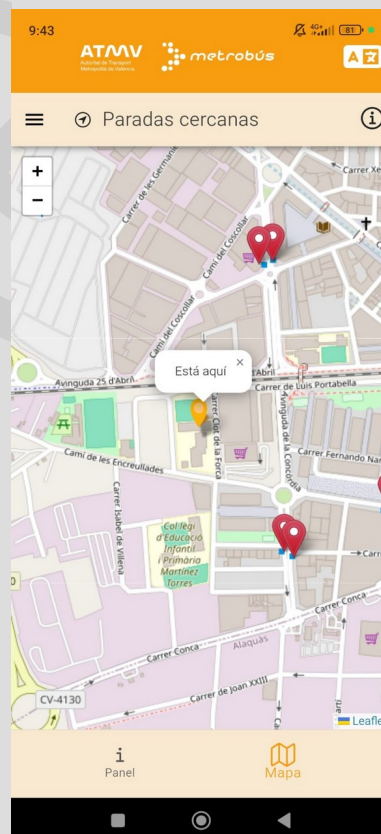

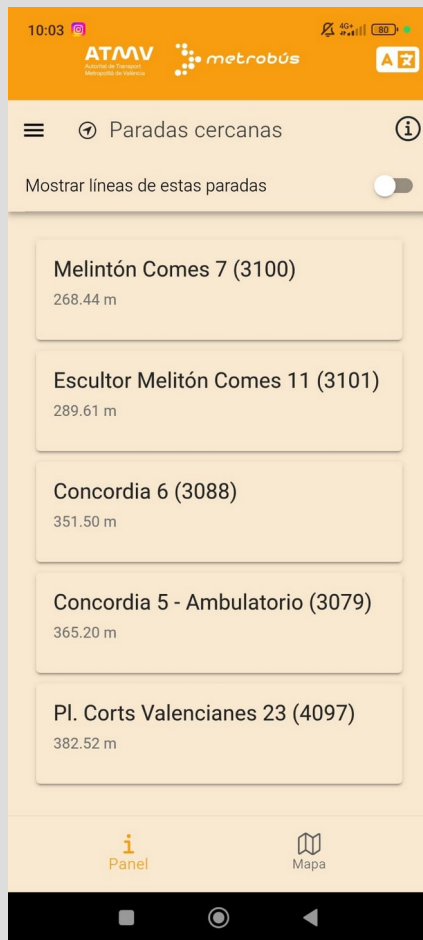

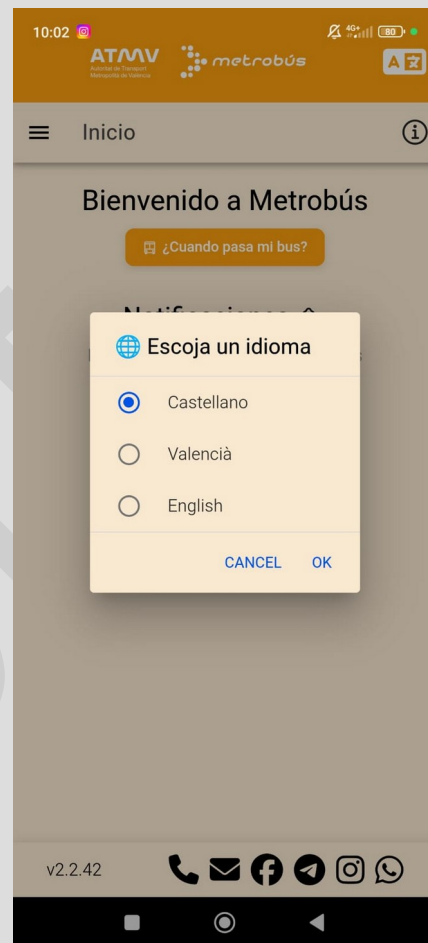

Menu | Navigation drawer
